

No. 4187

LA9215  
CD player output amplifier

### Overview

The LA9215 is an analog output amplifier designed for use in CD players, DAT and other digital audio equipment in combination with a 1-bit D/A converter. It can be used directly with non-stabilized power supplies because it has internal regulator and D/A power supply circuits.

### Functions

- Amplifier supports 1-bit DACs
- LPF amplifier
- ATT circuit
- Mute circuit
- DAC power supply (5.1V)
- Internal circuit regulator
- Internal power on/off mute circuit

### Features

- Allows compact implementation of CD player output circuits
- Supports 1-bit DACs
- Low harmonic distortion
  - 0.0006% typ (1kHz)
  - 0.0012% typ (10kHz)
- High S/N ratio
  - 108dB typ (JIS-A)
- Can be used directly with non-stabilized power supplies
- Low pop noise at power on/off

### Package Dimensions

unit : mm

3067 - DIP24S

## Specifications

### Maximum ratings at Ta=25°C

			unit
Maximum supply voltage	+V <sub>SUP</sub> max	14	V
	-V <sub>SUP</sub> max	-14	V
Allowable power dissipation	P <sub>d</sub> max	Ta ≤ 55°C, 152x111x1.6mm <sup>3</sup>	1.3 W
Operating temperature	T <sub>opr</sub>	-20 to +65	°C
Storage Temperature Range	T <sub>stg</sub>	-40 to +150	°C

### Recommended Operating Ranges at Ta=25°C

			unit
Recommended supply voltage	+V <sub>SUP</sub>	9	V
	-V <sub>SUP</sub>	-9	V
Power supply voltage operating range	+V <sub>SUP</sub> op	(not to exceed P <sub>d</sub> )	7 to 13 V
	-V <sub>SUP</sub> op	(not to exceed P <sub>d</sub> )	-7 to -13 V

### Operating characteristics at Ta=25°C, ±V<sub>SUP</sub>=±9V, Vi=2Vrms=0dB, fin=1kHz, RL=10kΩ

			min	typ	max	unit
Quiescent current	I <sub>SUP</sub>	No current	27	37	42	mA
	-I <sub>SUP</sub>	No current	-38	-33	-23	mA
ATT ratio	V <sub>ATT</sub>	LPF=20kHz	30.5	32	33.5	dB
Muting ratio	M <sub>r</sub>	LPF=20kHz	65	100		dB
S/N Signal - mode	S/N <sub>S</sub>	JIS, A	86	108		dB
S/N ATT - mode	S/N <sub>ATT</sub>	JIS, A	86	120		dB
S/N MUTE - mode	S/N <sub>MUTE</sub>	JIS, A	86	120		dB
Channel separation	CH <sub>sep</sub>	LPF=20kHz	80	105		dB
THD+N(1kHz)	THD <sub>1K</sub>	LPF=20kHz		0.0006	0.003	%
THD+N(10kHz)	THD <sub>10K</sub>	LPF=20kHz (fin=10kHz)		0.0012	0.004	%
Line output ripple rejection	Lin <sub>RR</sub>	LPF=20kHz, fin=120Hz	73	80		dB
Amplifier output offset voltage	V <sub>OFFS</sub>		-15		15	mV
Amplifier output offset voltage difference	V <sub>OFFSD</sub>	Signal mode - ATT mode	-10		10	mV
		ATT mode - Mute mode				
		Signal mode - Mute mode				

### [Voltage regulator for D/A]

Supply voltage	D/A <sub>V</sub>	No-load	4.8	5.1	5.4	V
Maximum output current	D/A <sub>I</sub>		25			mA
Ripple rejection	D/A <sub>RR</sub>	25mA load (fin=120Hz), LPF=20kHz	60	73		dB
Load regulation	D/A <sub>LR</sub>	25m load		2	100	mV

Function description

(1) Power on/off mute

When the supply voltage has not reached the operating voltage level, the system is in the muted state. Adding a capacitor to pin 24 will extend the period of time the mute is in effect after power is turned on.

- In the power on/off mute state, pins 15 and 17 are low active.
- When the power is turned on or off, and +Vsup and -Vsup rise and fall times are significantly different from each other, the power on/off mute function may not operate normally.

(2) 1-bit DAC amplifier

External resistance and capacitance can be added to configure a 1-bit DAC input amplifier.

- Capacitors will contribute to degraded harmonic distortion, so field dependence should be minimized.
- If the external components for the 1-bit DAC amplifier (differential input) have a large difference, the difference will become an offset, and DC will be cut in the LPF input stage.
- Use with a load short may damage the chip. Never use in a load short condition.

(3) Low-pass filter (LPF)

External resistance and capacitance can be added to configure an active filter.

- Capacitors will contribute to degraded harmonic distortion, so field dependence should be minimized.
- Use with a load short may damage the chip. Never use in a load short condition.
- The low-pass amplifier has internal resistance, so the output offset will vary with ambient temperature and consumed power.

(4) Output stage amplifier

Pins 20, 21 and 22 can be controlled to select signal, ATT or mute mode. Power on/off muting can also be used.

- Use with a load short may damage the chip. Never use in a load short condition.

(5) DAC power supply

Supplies 5.1V DAC power. Pin 23 can be switched between open and ground to turn the power output on or off.

- Use with a load short may damage the chip. Never use in a load short condition.

(6) +/- 6V supply

A supply is provided for the internal amplifier.

- Do not use this as an external power supply. Pins 14 and 18 should always have capacitors (about 47uF) inserted between them and ground.
- Use with a load short may damage the chip. Never use in a load short condition.

■ No products described or contained herein are intended for use in surgical implants, life-support systems, aerospace equipment, nuclear power control systems, vehicles, disaster/crime-prevention equipment and the like, the failure of which may directly or indirectly cause injury, death or property loss.
